Omowole Precious Michael

Full-Stack Software Developer

Lagos, Nigeria | +234 812 478 6454 | mpomowole@gmail.com

PROFILE

Full-stack developer with **3+ years at the Lagos State Internal Revenue Service**, building the systems behind tax operations: data-submission pipelines, internal registers and bulk eTax automation. Ships production **web and Android apps** end to end, backed by hands-on network and systems administration.

SKILLS

Languages

TypeScript · JavaScript · Python · Go · Rust · PHP · SQL

Frontend

React · Next.js · Tailwind CSS · shadcn/ui · TanStack Query

Mobile

React Native · Expo · NativeWind · Push notifications

Backend & data

REST APIs · MySQL · Redis · S3 / MinIO · OAuth 2.0 · Background workers

Cloud & tools

Vercel · Google Cloud · Apps Script · Firebase · Git

IT & infrastructure

Networking · Hardware · Helpdesk · Access management

Design

UI/UX · Adobe Creative Suite

EDUCATION

B.Sc. Computer Science
West African Union University, Cotonou
2022

WASSCE
Ogunlade College, Ijegun, Lagos
2015

EXPERIENCE

Lagos State Internal Revenue Service (LIRS)

Alausa, Ikeja, Lagos

Revenue Supervisor · full-time staff — Mar 2026 – Present

- Designed and built the **Financial Data Management Portal**, the **IT Asset Register** and the **Staff ID QR Verification System** (see Projects).
- Automated bulk eTax operations in Python (returns filing, Tax Clearance Certificates, profile updates, TAMA exports) with concurrent workers on the eTax API, covering 1,000+ taxpayer profiles.

IT Administrator / Software Developer · Contract & NYSC — Oct 2023 – Feb 2026

- Streamlined annual-returns processing and taxpayer identity records, including international payer IDs.
- Prototyped and helped deploy the **File Monitoring & Tracking System**.
- Kept domain infrastructure running with the network team (switches, cabling) and led Tier-1 hardware, OS and helpdesk support.

IT Intern — Jun – Oct 2021

- Built with PHP, JavaScript and Python on internal projects; configured domain networks across tax stations.

SELECTED PROJECTS

Financial Data Management Portal — LIRS — 2026

Portal for financial institutions to file monthly transaction data. A Go API and Rust worker share a Redis queue: uploads are quarantined, checked against versioned CSV templates, then stored immutably or rejected with an error report. Role-based access, OTP, audit logs.

Go · Rust · React · TypeScript · MySQL · Redis · S3/MinIO

IT Asset Register — LIRS — 2026

Tracks the directorate's hardware, custodians and assignment history. Nine built-in reports, including a life-cycle replacement forecast, data-quality checks and a pivot table; bulk CSV import, one-time passwords and a full audit trail.

PHP · MySQL · JavaScript · Apache

Staff ID QR Verification System — LIRS — 2026

Puts a branded QR code on every staff ID card; scanning it shows the holder's photo, name, staff ID and designation. Codes carry signed tokens, so tampered or revoked cards fail verification. Admin console, bulk CSV import and a scan log.

Python · FastAPI · SQLAlchemy · SQLite · Jinja2 · Tailwind

Habit Ledger — WEB & ANDROID — 2026

Privacy-first habit tracker: a Next.js PWA and a React Native Android app. Google Drive backup over OAuth, push reminders, Paystack payments, and AI trend insights from a ten-provider fallback chain with a fact check on every number. 350+ commits.

Next.js · React Native · Expo · TypeScript · Vercel · Firebase

LoanBook — CLIENT — 2026

Loan ledger for a lending business, kept in each user's own Google Drive. Excel and CSV import, Chart.js dashboards and repayment-reminder emails via Apps Script.

JavaScript · Google Drive API · Apps Script · Chart.js · PWA
